

STEM

During term four, students in Foundation will investigate and describe how people use Science, Technology, Engineering and Mathematics in their everyday lives. Students will explore a range of plugged and unplugged coding activities to describe and follow a sequence of steps. They will be using digital technologies to complete a challenge activity.

Students will also learn about aspects of Chemical Science through a range of activities. Students will observe, identify and describe changes to objects, materials and resources in their local environment using their senses. Students will conduct experiments and observe and describe changes they notice. They will also compare their observations to their predictions.

The theme for STEM lessons complements the Integrated Inquiry work being taught in classroom lessons.
